
The honest motorcycle, built from the ground up.

Limited to ***50 units*** *worldwide.*

THE BLACKSHEEP ONE

100% Electric.

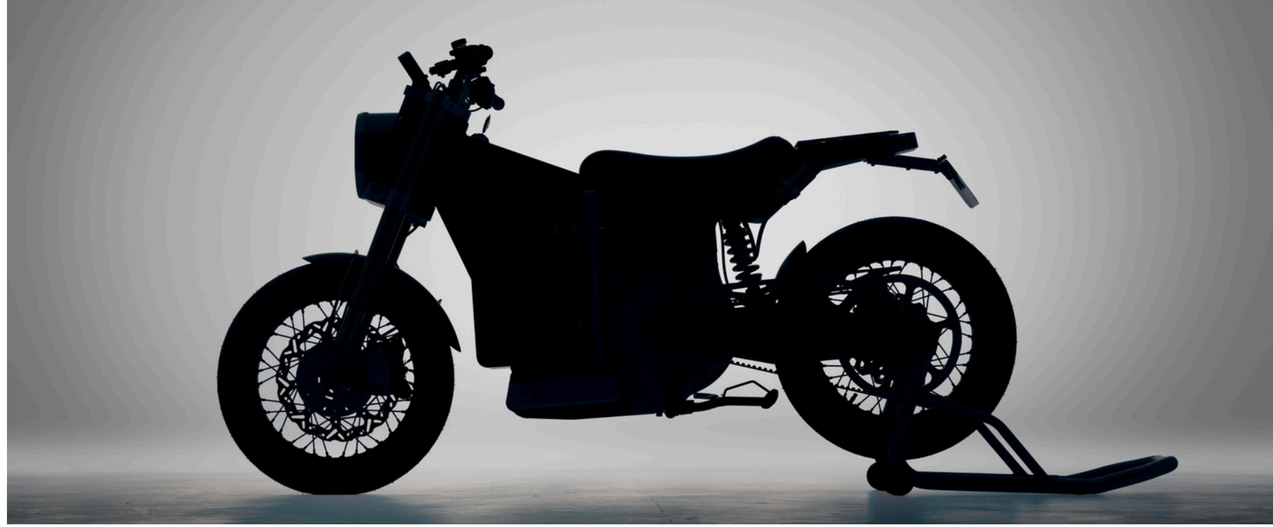
700Nm Wheel Torque.

35kW Peak Output.

160 km City Range.

MAKING SILENT ELECTRIC MOTORCYCLES ENGAGING

Our mission focuses on building motorcycles where engineering leads every decision. We create precision-engineered machines built to endure - bespoke to your identity and seamlessly integrated into a single system, where the motor, cooling, power delivery, and chassis work in absolute harmony.



Every Blacksheep ONE is machined from solid billet, strictly limited to 50 units worldwide.

What we deliver is a motorcycle that is genuinely fast, fundamentally honest, and undeniably yours to ride.

CARRYING THE BELIEF FORWARD

Over three decades, Mark Gilligan spent his career first in Formula One, then in life sciences, nanotechnology and precision engineering. Different worlds, but the same habit carried through all of them: work the problem out from what the physics actually demands, not from how it's normally done.

"I strive to do things that have never been done before and at the leading edge of what can be done."

That's the approach behind the Blacksheep ONE and it's why our motorcycles look different from other motorcycles.

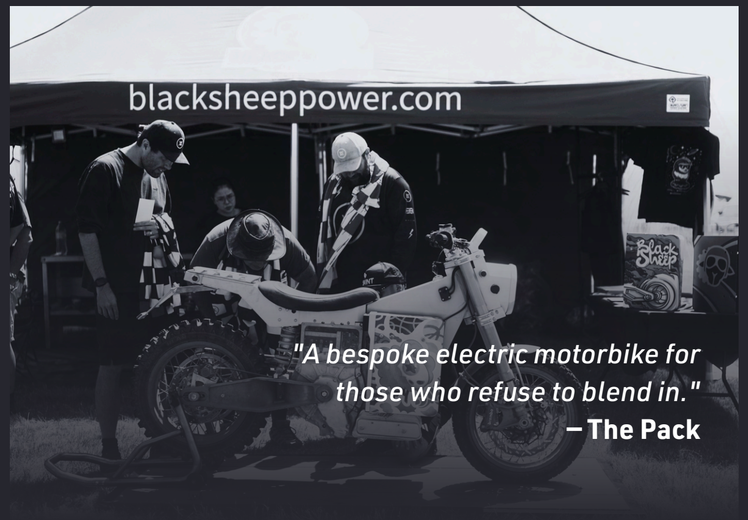
SEEN, RIDDEN, RACED

Before you take our word for it.

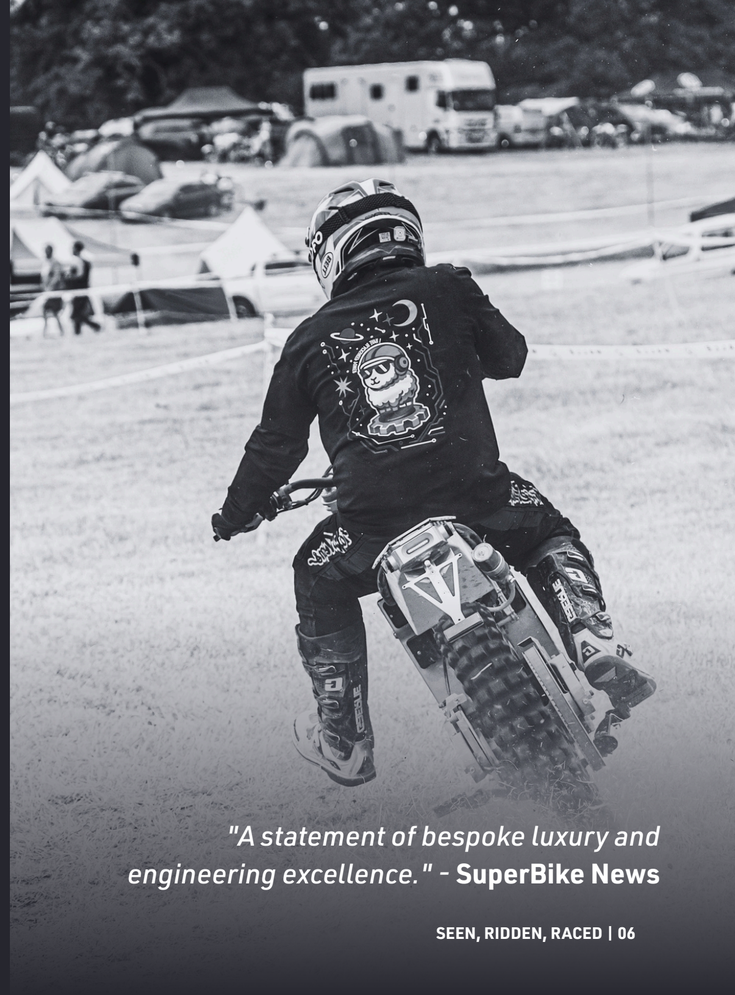
Entered in its first race before it was even a finished product. Shown publicly since. Noticed by riders, engineers and press who don't assume "electric" and "engaging" go together.

"A machine with a focus on craft and performance."
– Wallpaper*

"It's the opposite of how most motorcycles are developed."
– Buck City Biker



"A bespoke electric motorbike for those who refuse to blend in."
– The Pack



"A statement of bespoke luxury and engineering excellence." - **SuperBike News**

THE BLACKSHEEP ONE

The Honest Motorcycle. Quietly Different.

THE DEVELOPMENT

01 – 2017 · Prototype 1 · Proof of concept

Mark built the first bike alone as a solo engineering challenge to convert an old Honda Cub into an electric motorcycle that looked like a BMX bicycle. When riding it, many people asked Mark whether they could buy one!

02 – 2018 · Prototype 2 · Public debut · COVID pause

Mark decided to see whether the BMX Cub bike could be engineered as a good product. This led to building a series of rideable prototypes with test rides and feedback. COVID then forced the project to be paused.

03 – 2023 · Restart and target revision

Once COVID had passed, Mark was thinking about restarting the motorbike project, but didn't feel proud enough of the old prototypes. During this time, Mark conceived of BilletFlux™ and decided that if developing a motorbike, it should be something very new. This catalysed the development of the first BilletFlux™ prototype.

04 – 2025–2026 · Ground-up redesign · The Blacksheep ONE

Building on lessons from Prototype 3, the team developed the motor, cooling, power delivery and frame for higher performance and improved reliability, moving the programme toward limited production in 2026.

IT HAS NO HIDDEN PARTS.

The Blacksheep ONE is built on exclusive engineering you won't find anywhere else. It is designed to let the engineering do the talking.

Every part exists for a reason. Every system is designed for precision, performance, and durability - setting a new benchmark for what modern engineering can deliver. From the cooling pathways to the frame geometry, form and function are seamlessly connected - creating a motorbike that is both striking in its looks and uncompromising in its performance.

Not a single part of the bike is there to cover anything up. Everything is on show.

PERFORMANCE

160 km (100 mi)
Maximum range

35kW (47hp)
Horsepower (HP)

700Nm (516lb-ft)
Wheel torque

130km/h (80mph)
Max speed

3500 rpm
Max RPM at 130km/h (80mph)

DIMENSIONS

1400mm (55in)
Wheelbase

810mm (31.9in)
Seat height

150mm (5.9in)
Ground clearance

24.5 degrees
Rake angle

190kg
Weight

BATTERY

6-9 kWh
Battery capacity

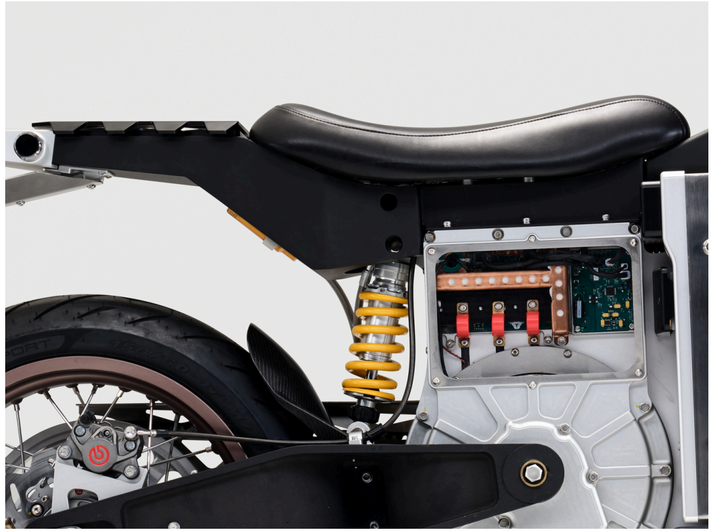
Lithium-ion 21700 cells
Battery type

2 hours
20-80% charging

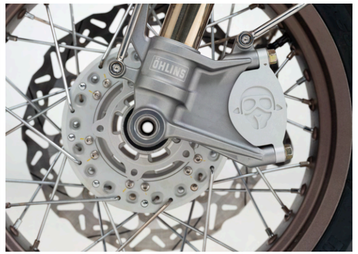
Onboard charger
2kW onboard charger with 110-250V input voltage range

Range per charge (km)
80km outside the city
160km in the city

SPECIFICATIONS



Motor
BilletFlux™ - Designed and Developed Axial Flux Motor. BilletFlux™ replaces traditional wire-wound coils with CNC-machined solid billet copper.



Wheels: Spoked wheels with Blacksheep Power CNC-milled billet hubs; Takasago Excel rims (optional specification)

Front tyre: 120/70-17
Rear tyre: 150/60-17

SPECIFICATIONS

Brake system

Front brake: Brembo Radial Caliper - 320mm disc.
Rear brake: Brembo Rear Caliper - 240mm disc. Pressure sensitive regenerative braking.
Front brake lever: Brembo RCS19.
Rear brake lever: Brembo RCS16.
Regen braking: Front brake when pulled fixed regen. Rear brake regen increases as brake force increases.

Suspension system

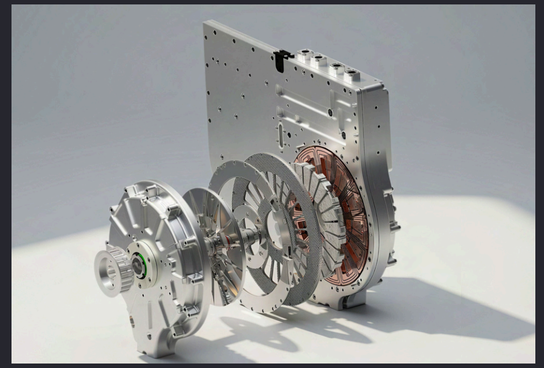
Front: Blacksheep own design of triple clamps with integrated hydraulics for rear brake - Öhlins upside down forks 120mm travel.
Rear: Blacksheep own design cast rear swingarm with Öhlins Rear shock with compression and rebound damping adjustment - 100mm stroke.

Other features

Frame material: Aluminium.
Chassis design: Laser cut, folded and welded aluminium bolted to billet plates.
Thermal management: BilletFlow™ system.
Rider modes: Eco, Drive, Sport.
Traction control: Standard in Eco and Drive modes.
Waterproof standard: IP67.

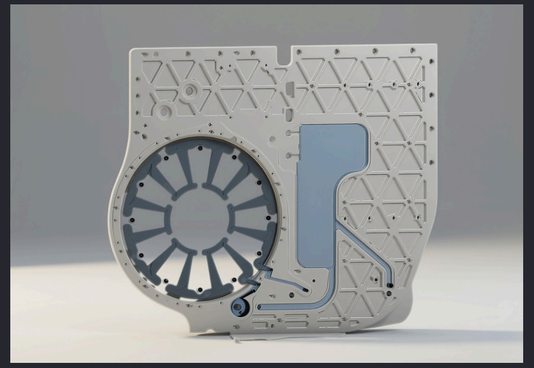
WE ARE DESIGNERS AND INNOVATORS.

Reinvented the complete electric powertrain system for high-performance motorcycles.



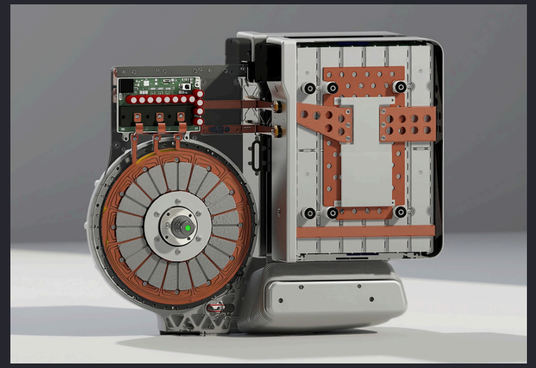
BILLETFLUX™ – THE MOTOR WITH NO WOUND COILS

A conventional motor's coils are wound from copper wire – precise, but reliant on expensive winding machinery, or inconsistent by hand. BilletFlux™ machines each coil from solid billet copper instead, the way a circuit board replaced wired connections in electronics. Every coil identical. More copper, less resistance, less heat.



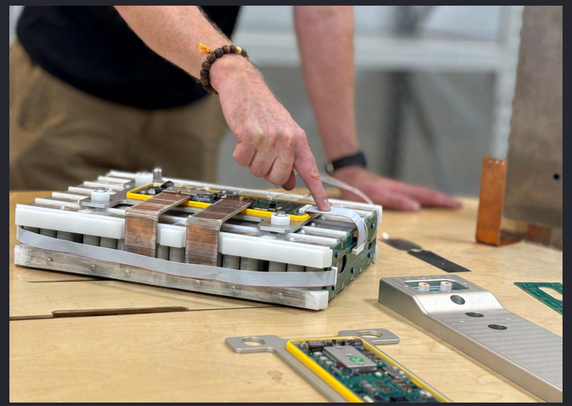
BILLETFLOW™ – COOLING MACHINED INTO THE MOTOR

Denser copper means more heat to move. Instead of bolting on pipes and tubing, BilletFlow™ builds cooling into the structure itself – a channel running through the stator, an integrated pump, a cooling plate that sheds heat directly. Nothing plumbed on afterward.



BILLETPOWER™ – POWER DELIVERY WITH NO CABLES IN THE POWERTRAIN

The same logic carries to power delivery. Current runs from battery to motor through solid billet components – busbars in place of wiring, cooling built the same way. One machined path, from cell to field coil.



ONE SYSTEM, ALMOST NO CABLES.

"We chose to develop the whole system from scratch. We didn't buy anything from suppliers. The reason is that we want to be sure we can overcome the existing challenges of quality and reliability of normal motorbikes."

The Blacksheep ONE's power and electrical systems were developed in-house, from scratch. At the heart of the motor, BilletFlux™ coils are CNC-milled from 10mm-thick copper billet. Busbars carry that power from the stator to the power controller and straight on to the battery, so the high-power side has no flexible cable to add resistance or wear out over time. Across the headstock, only two cables cross between the handlebars and the bike. One carries CAN and power. The other carries the safety-critical signals from throttle, brakes and kill switch. There is no conventional wiring loom, and far fewer things to fail.

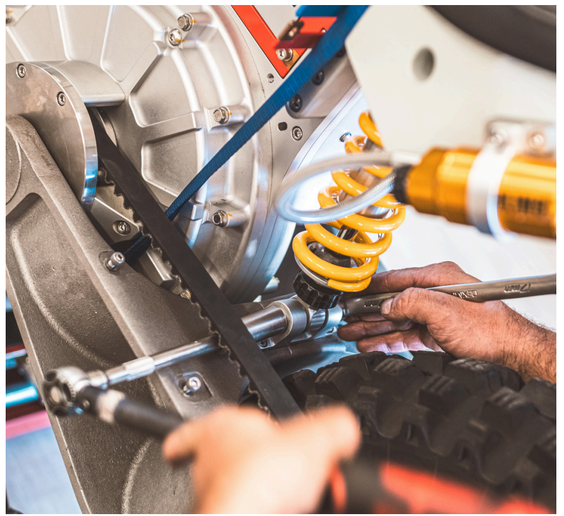
BUILD YOUR BESPOKE BLACKSHEEP ONE

A step-by-step process to own **the Blacksheep ONE**.

01 - RESERVE YOUR BUILD SLOT

02 - CO-DESIGN

03 - PRODUCTION



04 - DELIVERY

01 – RESERVE YOUR BUILD SLOT

Secure one of just 50 Blacksheep ONE build slots worldwide with a £1,000 + VAT initial payment.
Each number corresponds directly to a production slot. Once all 50 slots are allocated, this edition is closed.

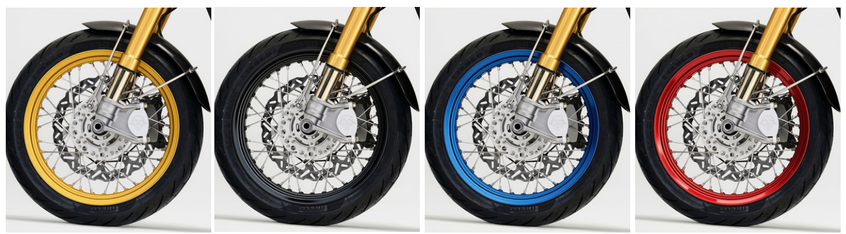
02 – CO-DESIGN

Starting from our engineered base platform, we collaborate with you to create a bespoke specification that allow each motorcycle to reflect its rider.

You will receive a full configuration proposal including specifications, visuals, pricing and estimated delivery. A £10,000 + VAT build payment is required to start the production phase.

FRAME & FINISH:
Frame colour and finish options.

WHEELS:
Wheel designs and finishing options.



The models shown above serve as baseline concepts. We offer full bespoke customization upon request to bring your exact vision to life.

BATTERY OPTIONS:
Battery capacities between 6-9Kwh.
*No difference in size or weight.

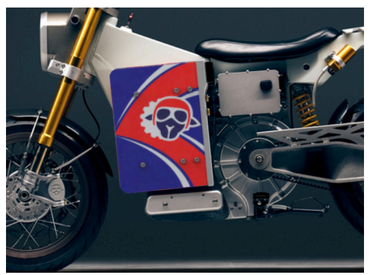
ÖHLINS SUSPENSION OPTIONS:
Öhlins suspension options with varying preload and damping adjustment options as well as customer specific setup options.

PIRELLI TYRE OPTIONS:

BATTERY COVER:

Artwork editions and bespoke designs.

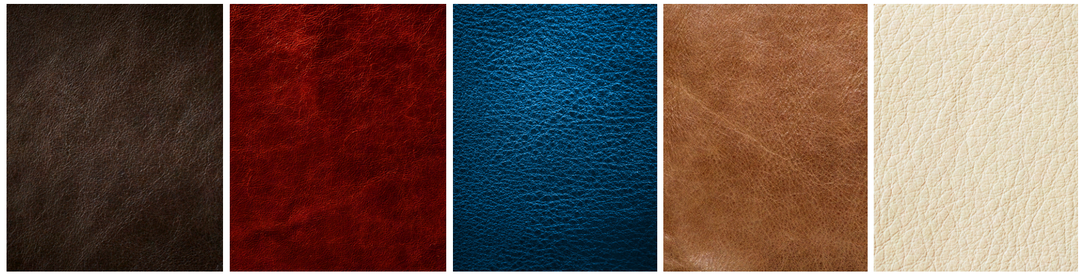
You can customize the artwork as disired or leave the battery cover plain to suit your preference.



The models shown above serve as baseline concepts. We offer full bespoke customization upon request to bring your exact vision to life.

SEAT:

Material, colour and stitching options.



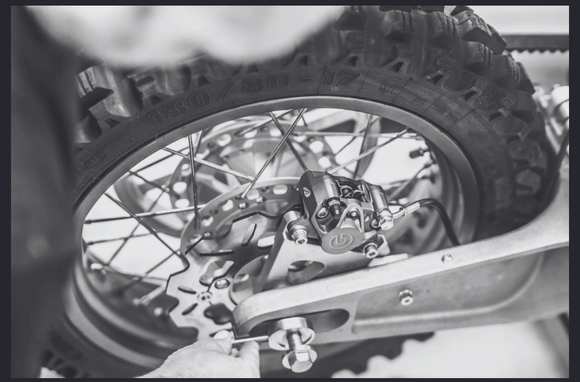
The models shown above serve as baseline concepts. We offer full bespoke customization upon request to bring your exact vision to life.

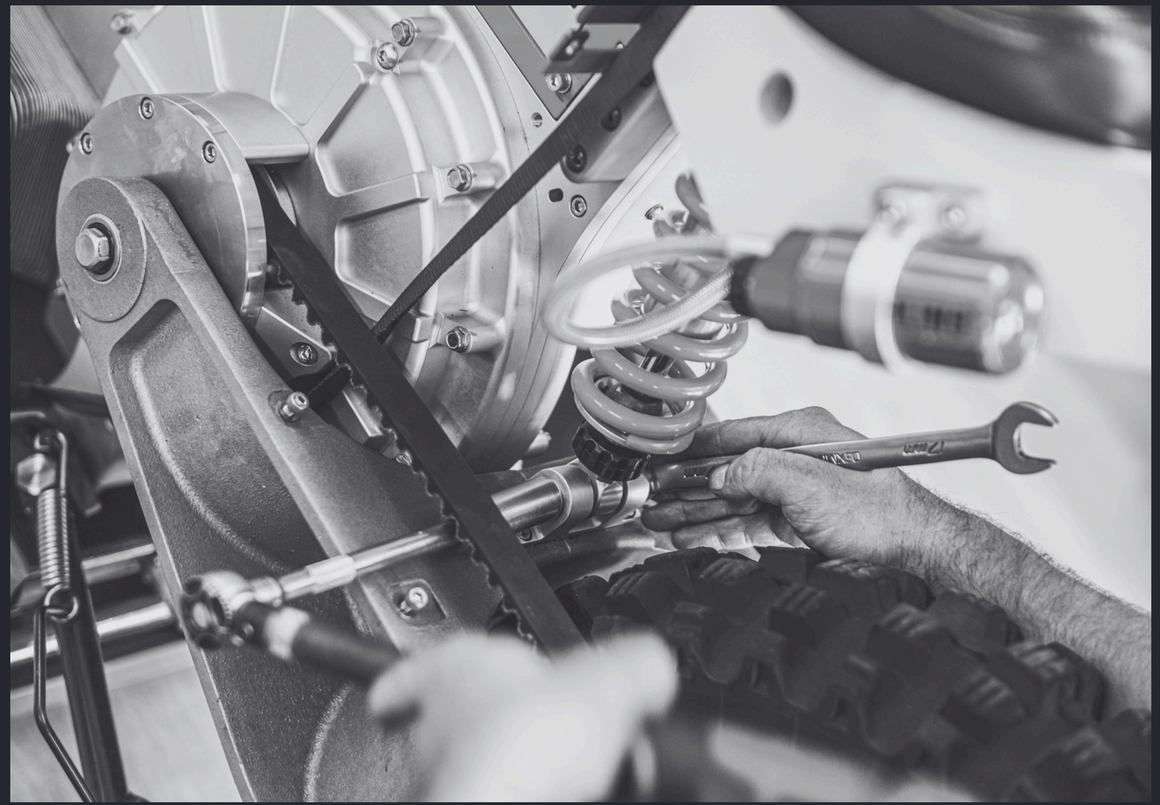
03 – PRODUCTION

Your Blacksheep ONE enters production. Each motorcycle undergoes:

- Precision machining and fabrication
- Assembly of chassis, powertrain and systems
- Testing, calibration and quality control

You will receive updates at key milestones throughout the build.





04 – DELIVERY

Before delivery, we will:

- Confirm the remaining balance after deducting previous payments.
- Finalise delivery details.
- Arrange handover or a pre-delivery visit where possible.
- Invoice the final payment which will depend upon configuration choices made by the customers.

The Blacksheep ONE is road-legal in the United Kingdom. We also support you in meeting local requirements to prepare the bike for road use wherever you are.

YOUR BLACKSHEEP ONE IS THEN DELIVERED, READY TO RIDE.

PURCHASING POLICY

Key terms to know before placing an order.

All purchases made through Blacksheep Power are subject to our Purchasing Policy. The summary below highlights the main terms; customers should review the full policy before completing a purchase.

KEY TERMS:

1. FINAL SALES
Purchases are generally non-refundable once completed, subject to statutory rights and the limited exceptions set out in the full policy.

2. NON-TRANSFERABLE
Purchases, reservations, licences and other service entitlements cannot be transferred, resold or assigned to another person or entity.

3. LIMITED EXCEPTIONS
A refund may only be considered where a purchase was made in error due to a verified technical fault on Blacksheep Power's systems and the product or service has not been accessed or used. Claims must be submitted within seven days.

4. YOUR STATUTORY RIGHTS
Nothing in the policy affects customers' statutory rights under the laws of England and Wales, including rights relating to faulty or misdescribed goods and services.

5. GOVERNING LAW
Purchases are governed by the laws of England and Wales.
